EAST SIDE THIRD STREET,
BETWEEN MARKET AND JEFFERSON.

FRIDAY..... FEB. 20, 1857.

The New York Courier and Empire says that Mr. Marx has conducted the affairs of the State Department with masterly ability and general satisfaction. This is an admission from a violent opponent in political matters. It is admitted on all hands that the treasury has been well managed; that the Secretary of War has done excellent service in his department; and even the London Times eulogizes the report of the Secretary of the Navy, and considers it a model for English imitation. It is said that the Attorney General has showed the greatest ability and research in his department, and that he leaves a rich legacy to his successor in his indefatigable labors. The Postmaster General never does right; he has to bear all the sin of the country. Irregularities, and loss letters are charged to his account. He needs good nerves, and what is called a thick skin, for he can't defend himself against so-called, snow storms, swollen rivers, and all other casualties; yet the present Postmaster's report is unchallenged. He has worked indefatigably, and to good purpose. The Secretary of the Interior has committed no sins that his enemies could make any capital out of. It is not alleged that his department, complicated as it is, has not been well managed. The head of the Cabinet, the President, is also led by all the factions to be a great sinner. There is no doubt of his weakness and wickedness. But he goes out of office unscathed after all. He has not pleased everybody, and it is well he hasn't; and it is well he is abused by his opponents. If he had not been, it would have been proof positive of his unworthiness. After all the fuss about Kansas, it has settled down under precisely the same policy that the President and his friends pursued at the start. Bleeding Kansas is no more. The evil deeds were those of other people; the President did not commit them. The result illustrates the semi-futility of the opposition, and makes it as clear as the shining sun. It will require only a brief space of time, and the factions will begin to see that President Pierce did well, and that his policy was a good one. They will rail at the Democracy years hence, as not the same party. They will tell the people that Pierce and his party would do, but that these modern Democrats are miserable. So it goes. We recollect that a wretched Jackson was his day, and what an accursed party he had, and what a miserable creature Polk was; but these things have passed away. The factions have forgotten not only what Democracy was, but what they were themselves.

Since the late tragedy in New York city, the papers have a good deal to say about the depravity of the place. The revelations made in the case, give no favorable idea of the morals of responsibility in that locality. There is a great deal of freedom shrinking in New York, and much alarm at the sin of slavery; but the philosophers of that school have not made out to connect the depravity just brought to light with slavery. The crime of murder is not uncommon; and even such a murder as that of Dr. Bassell is no worse than we frequently find to reward; but if the prevailing impression is true, that the murderer was meditated and carried by the inmates of his own house, and preceded by a shameful marriage, in which a mother was one of the principals, and her daughter a witness, it presents a case of depravity that we command to the special attention of Harriet Beecher Stowe. She should hear it in detail, with all the details of private matters of the same dark hue, when she writes another Uncle Tom's Cabin. In that work an instance of depravity is engrafted there is that amongst the qualities; perhaps something like it occurred at some time; and makes her simple readers believe that it is a picture of slavery; when, if such a deed was done in the south, its guilty perpetrators would be hounded down, with a much vengeance as now pursues the suspected murderers of Dr. Bassell. An ingenious author could draw a terrible picture of life in a free city, and ascribe it to all the workings of its institutions. We think it likely, however, that there is some virtue in New York city, after all, and that the misdeeds of Bassell are exceptions; otherwise, freedom is a very bad thing.

In looking over the late proceedings in the case of Bassell, in New York City, one aspect of the affair will strike every one; and that's our treatment of witnesses. We don't know which has the harder fate, the accused or the witness. The latter are led over to appear in court when called upon, and if they can't give security they are locked up. Poor Farrell, who gave the most important testimony, if it were true, has a family, and no means for their support. He is confined in prison, and must remain in until the trial. This is necessary to the ends of justice; but, at the same time, witness are not likely to come forward at the risk of such treatment. Perkins Farrell committed perjury, but he is not imprisoned for that. He has committed no offense, but he has done his duty; yet he is punished; because he unfortunately let the authorities know that he knew something. It is a matter of wonder that no one has been found to give any account of the man's whereabouts from four or five o'clock until ten or eleven. If any one knows, he runs the risk of imprisonment if he gives any information, unless he has influence and friends to save him from such a fate.

The editor of New York Herald lately stated to his readers that that paper had a circulation of \$60,000 daily; the statement, to the Post-office, under oath, is but \$39,000; that is a great falling off. How some editors are given to lying. This one was a freedman.

CHARITY AT A DISCOUNT OF TWENTY PER CENT.—The Indianapolis State Sentinel of Tuesday says that it is a curious fact that the collections taken in the churches, in that city, last Sunday, were almost entirely composed of depreciated Spanish coin—charity with 20 percent off.

HON. JESSE D. BRIGHT AND THE CABINET.—The Indianapolis Sentinel says:

We learn that Senator Bright has been tendered the Department of the Interior by Mr. Buchanan, and is willing to aid in forming an administration. At the last advises Mr. Bright had not yet determined whether he would accept or decline the position.

SUMMONS'S SENTENCE.—There exists a very popular movement in Cincinnati to secure the commutation of Summons's sentence of death to that of imprisonment for life.

AN ARTIST DEAD.—The Philadelphia Journal announces the death, in that city, on the 14th inst., of Herman D. Canfield, a talented young artist, a native of New York.

AN AUCTIONEER'S CLEW.—In New York, being directed by his employer to advertise a copy of a fresco by Raphael, wrote, "A small cow by Raphael."

The difference between Perseverance and Obscurity—she is a strong will, the other a strong won't.

Art, Science, and Discovery.

As in China, Thibet, and largely employed by the Chinese in dying, and to some extent in paper making, as with us. Surgeons apply it variously, after depriving it of its water of crystallization, and in domestic life it is used for precipitating vegetable substances suspended in potable water. It is used also by the Chinese in a manner peculiar to themselves. Fishermen are usually provided with it, which they take out of their nets. Rishen, which abounds on the coast, they rub the animal with the pulverized stony, to give a degree of coherence to the gelatinous mass. Architects employ it as a cement in those airy bridges which span the water courses. It is poured in a molten state into the interstices of the stones; and in structures not exposed to water, and bakers, dentists, and skin diseases, the latter are treated with the flour and water. Alum was first introduced into China from the West; and until a comparatively recent period the best kind, called sometimes Persian, was brought from Western Asia.—*Scientific American.*

SCIENTIFIC FACTS.—The London Lancet says that there are a quarter million of persons living in Great Britain constantly under ground in the darkness of mines. The average age of Sheffield workmen is thirty-five years; the average of the dry grinders of needles very much under this figure. The chief disease of the miners is scrofula, and bakers, dentists, and skin diseases, the latter are treated with the flour and water. Alum was first introduced into China from the West; and until a comparatively recent period the best kind, called sometimes Persian, was brought from Western Asia.—*Scientific American.*

SCIENTIFIC FACTS.—The London Lancet says that there are a quarter million of persons living in Great Britain constantly under ground in the darkness of mines. The average age of Sheffield workmen is thirty-five years; the average of the dry grinders of needles very much under this figure. The chief disease of the miners is scrofula, and bakers, dentists, and skin diseases, the latter are treated with the flour and water. Alum was first introduced into China from the West; and until a comparatively recent period the best kind, called sometimes Persian, was brought from Western Asia.—*Scientific American.*

FRIDAY..... FEB. 20, 1857.

Local Affairs.

INFORMATION WANTED—Of the address and residence of Dr. Richard Carter, who resided in Louisville some six years ago. Address Harvey & Hughes, Louisville, Ky.

SOME KEY TO THE SUICIDE—We have made some further inquiry into the painful circumstances connected with the suicide of the German, on Wednesday, whose name we gave as Nicholas Dominic. We learn since that his real name is Francis Dominic Noyes, although many of his acquaintances know him as Nicholas Dominic. The corruption of name was no fault of his, however. So far from leaving a family to mourn his loss, he was a bachelor. He was a native of a French province on the German side of the Rhine, and had served creditably for fourteen years in the French army, from which government he enjoyed a pension; he also spent seven years of his life in Africa. He had become very eccentric at times, of late, and his friends had often doubted his sanity.

The immediate inciting cause of his fatal rashness was disappointed affection. He was deeply devoted to a lady of this city, and made to her a proposal of marriage a short time ago, the fate of which proposition was to have been made known to him the very morning of his death. Receiving no reply from the lady, and through bitter disappointment, doubtless in parting somewhat in drink, he chose the uncertainties of "that undiscovered country" to the rest or fancied misery of mortality. Poor fellow!

STATISTICS OF THE FIRST WARD—Our friend Gideon T. May, Esq., the County Assessor, has just completed his labors in the First Ward of the city. It appears from his books that there are 1,551 voters in the two precincts composing the ward. The number of marriages in the ward during the year 1856 was 116. Not as the fruits of marriage, relations, of course, but as a result of former marriages, 554 children were born in the ward during the year. This enrollment does not include the births of the current year, the accounts closing with the close of last December. The number of deaths during the same period was 135, which is a gratifying exhibit of the health of that favorite and favorite locality of our city.

PASSING COURTHOUSE—Mo. No. 1.—We announced yesterday morning that two brothers, John and Green Sawyer, had been arrested, on Wednesday, upon the charge of passing counterfeited money. They had passed but one bill—a twenty on the Southern Bank of Ken-tucky—which was promptly reclaimed again. They are very foolish, ignorant looking men, and can neither read nor write, and doubtless, their ignorance extended to the money they carried. They were partially examined yesterday in Police Court; but, in order to give them an opportunity to show where they had obtained the money, the examination was continual.

RECOVERING STEPHEN CATTIA—James Green, of Lawrenceburg, Anderson county, Ky., was arrested in this city yesterday and brought before Police Court, upon a charge of selling to J. A. Gandy, of this city, three beef cattle belonging to Wm. L. Hays, of Shelby county, known to have been stolen by a negro man. The transaction took place about three months ago, and Green confesses his guilt. His counsel plead the ignorance of the accused in extenuation of the crime. In the absence of testimony, the examination was continued for a few days.

THE FEMALE DEPARTMENT OF THE SECOND-WARD SCHOOL—The pupils under the care of Miss Sallie Clark and Miss Margaret Robinson have made arrangements for a most pleasing celebration of Washington's birthday, in the school buildings, today. The exercises will consist of selected readings, vocal and instrumental music, a taste dinner party, closing with a social conversation. It was impossible to entice the public at large, and the pupils, therefore, have been placed in their invitations.

THE SWISS—We understand that the Swiss of this city intend to have a procession next Monday, the 2d of February, the day after the birthday of General Washington. They start from the Union Hall on Market street, between Third and Fourth streets, at one o'clock, p. m., and wish that we would invite every one to accompany them, who is willing to march out, in honor of that great patriot.

SLACK-WATER NAVIGATION IN THIRD STREET.

Third street, between Market and Jefferson, was visited on Wednesday by the street-hands of the Eastern District, and the accumulated dirt and filth of the entire winter were scraped into little piles and long ridges, and left in that condition until yesterday, when it was designed to cart it away. The waters from the heavy rains of Wednesday evening and Thursday morning were effectively dammed by these dirt-piles and ridges, and the square yesterday morning presented the appearance of an inland sea, dotted here and there by alluvial islands, and relieved near Market street by two peninsulas of dirt. So deep were the sommings in many places, shy horses demurred when goaded to make an entrance, and nervous drivers effected other thoroughfares. From our office windows the scene was one of grandeur to the imaginative mind, as the beholder, in fancy, inhabited the embayments with Cobans, West Indians, and Hawaii-islanders, and peopled the two continents of accumulated dirt with Americans and Europeans. But, later in the day, the filibustering scavengers came along with their shovels and carts; a German prince of the shade took possession of the Island of Cuba; a trio of Irishmen reduced the West Indies, and the allied forces invaded the two continents, our imaginary sea dried out by degrees, and we crawled down slow from our elevated position in the air.

ANOTHER CASE OF BRUTALITY—An old German from the upper portion of the city, named Lemon, was arraigned before the Police Court yesterday for drunkenness and brutality toward his family, consisting of an old lady and two very good looking daughters. Among other things he had cut a fine soft and two birds with an axe, and threatened his elder daughter with a burning. Thinking to protect his family, doubtless, he charged his own daughter with an unwarrented intimacy with a married man of this city, who sustained a high reputation as an indiscernible lover of the gender sex. The reportorial corps and the court were, of course, shocked at the bare recital, while the mortal taste of the loungers without door were immensely gratified. Lemon was held to bail for his good behavior six months in the sum of \$500.

A MAN ATTACKED BY A WOLF IN THE STREETS OF MADISON—Last Saturday morning, as we learn from the Madison (Wis.) State Journal, a young man named P. Bowman was attacked by a wolf, in Washington avenue, in that city. It flew at his throat, and bit for his tongue in quickly drawing a small knife and stabbing it, he would doubtless have been killed. It followed him, however, and made subsequent attempts to get at him, till he arrived at the American House, where he worked. Even then it stood in the middle of the street, and did not leave till two Germans, called forth to attack it. The same animal, it appears, also attacked another man the previous evening.

MACHINERY FOR THE WATER WORKS—We see that President Harris, of the Water-Works, advertises for proposals for furnishing the necessary pipes and machinery for the contemplated Water Works. No mechanics in the world are mechanically superior to our own, and they have the resources for furnishing all these supplies; therefore let this important contract be filled by home mechanics. We sincerely trust that no manufacturer and artisan will not allow himself to be outdone by them for a work which is peculiarly their own.
